

Chapter 2: JSON Manifest

2.1 The manifest.json file

2.1.1 JSON file structure

Paquete requires a json file to store the package structure information. The file called **manifest.json** should have the following structure.

```
{
  "toc": [
    {
      "visible": true,
      "relPath": "c09bf5db57268971eb69ab42e127cc60/Test_document.htm",
      "title": "Test Document 1",
      "children": []
    },
    {
      "visible": true,
      "relPath": "007060ee3acef61589935e9d3fb33aca/Test_document2.htm",
      "title": "Test Document 2",
      "children": []
    }
  ]
}
```

Each document is defined within the structure as:

```
...
{
  "visible": true,
  "relPath": "c09bf5db57268971eb69ab42e127cc60/Test_document.htm",
```

p.2 JSON Manifest

```
    "title": "Test Document 1",  
    "children": []  
}  
...
```

2.1.1.1 JSON Attributes Definitions

visible

If this attribute is set false, then the document will not be shown in paquete's TOC (Table Of Contents).

relPath

Actual file path for the document.

title

Title of the document.

children

Array of child-documents of the document.

Paquete also supports the [jsTree jquery tree plugin](#) which is described [here](#).
