

Type of copyright

If the Copyright isn't reproduced with permission and if we have the file for any SRMS, ICE outputs copyright code and checks the copyright code

If the Copyright IS reproduced without permission get the copyright notice.

Check the copyright code.

If there is something in the code field:

Copyright code is valid if we find "Commonwealth of Australia" or "WARNING"

If the code is "no copyright code" AND copyright notice doesn't have "Commonwealth of Australia" or "WARNING" treat it as Special

If the copyright code is "RWP" and there is no copyright notice then an error is generated - "Reproduce with Permission copyright code found but do not copyright notice"

If the copyright code isn't "RWP" and there is no copyright notice, then an error is generated - "No copyright code but has a standard copyright notice"

If there's no code and no notice, an error is generated - "No copyright code and copyright notice"
